

Material falls

Working on scaffold means to work with little spaces and on structures not always constructed properly. The fall of objects or materials from a scaffold can occur for various reasons. For instance, due to a bad assembly of the structure or the lack of skirting boards around the perimeter.

Installing scaffold netting, as anti-object or anti-debris safety nets, can prevent damages from falling tools or utensils. For this, it must be verified that the safety net that protects the scaffolding does not have any crack through which an object can fall.

Cleanliness and order on scaffolding are two of the most important tips to avoid tripping. The staff must organized the tools and materials, as well as its cables. Likewise, any liquid should be prevented from wandering freely on the scaffold floors.
